Project Name	Web Phishing Detection
Maximum Marks	2 Marks

I am Internet user	I'm trying to use an e-commerce websites	But I found a scam	Because an attacker uses a fake website which is similar to original website	Which makes me feel insecure, unsafe as my personal informations has been shared to the fake website which makes me feel frustated.
I am Enterprise user	I'm trying to open one of the mails I received	But I detected a malicious activity	Because they are not cryptographically signed.	Which makes me feel that there are third party intrusions and also there is no proper verification of E-mails.
I am Online banking user	I'm trying to open the internet banking facility provided by theSMS link to update the KYC	But the link provided is not secure	Because the prompt from browser came as http link which is not a secure website	Which makes me feel leakage of user's data to the scammers.
